MALAYSIAN PALM OIL COUNCIL

COMPANY PROFILE:

Palm oil is derived from the flesh of the fruit of the oil palm species *E. Guineensis*. In its virgin form, the oil is bright orange-red due to the high content of carotene. Palm oil is Nature's Gift to Malaysia, and Malaysia's to the World.

Palm oil is semi-solid at room temperature; a characteristic brought about by its approx. 50 percent saturation level. Palm oil (and its products) has good resistance to oxidation and heat at prolonged elevated temperatures; hence, making palm oil an ideal ingredient in frying oil-blends. Manufacturers and end-users around the world incorporate high percentages of palm oil in their frying oil blends for both performance and economic reasons.

In fact, in many instances, palm oil has been used as 100 percent replacement for traditional hydrogenated seed oils such as soybean oil and canola. Products fried in palm oil include potato chips, French-fries, doughnuts, ramen noodles and nuts.

MISSION

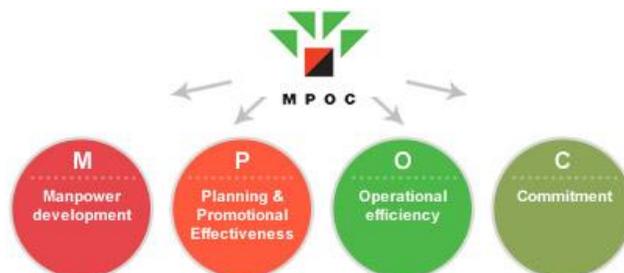

To promote the market expansion of Malaysian palm oil and its products by enhancing the image of palm oil and creating better acceptance of palm oil through awareness of various technological and economic advantages (techno-economic advantages) and environmental sustainability.

OBJECTIVES
