

COMPANY PROFILE:

Founded in March 1998, by webmasters who sought to create a perfect web hosting environment for fellow webmasters of all types, Nexus answered the needs of many Internet users for a reliable source of free services. At that time, Nexus offered e-mail forwarding, mail accounts and e-mail list management. In 1999, Nexus upgraded its service offerings and began offering virtual domain and sub-domain hosting, along with domain name services and thus became a commercial webhosting company.

Today, Nexus specializes primarily in website solutions. With our offices in all major cities in Pakistan, we provide shared hosting, virtual private servers, dedicated servers, cloud hosting, co-location and managed hosting services along with consultancy and training services world-wide and are proud to serve thousands of customers across the globe.

Unlike other companies, Nexus actually owns our hardware on which we provide services. Thus we have the control and flexibility to actually deliver what we advertise. With innovations in control panel technology, and hosting package offerings, Nexus continues to stay one step ahead of the competition. We are one of the few hosting firms to offer both Linux and Windows based hosting solutions. Our high quality packages coupled with our 24 hour support make our solutions the best value proposition in the industry.

We continue to expand our market share in many fields and compete aggressively to offer the best technology to each and every client. Along with our end-user/retail clientele, Nexus has an extensive network of resellers and web developers that market Nexus services. Many Web Hosting companies provide private label Nexus services to provide their own line of Web Hosting and Internet solutions. Nexus is the back-end to many well-known firms in the industry and a pioneer in the dedicated server market.

Our

Some of achievements include;

Achievements

- cPanel and Parallels partner - the industry standard control panel providers.
- CloudLinux Partner - secure hosting platform providers.
